intoPIX EMMY® Award-winning JPEG 2000 Encoder and Decoder IP-Cores protect high value images. Handling simultaneously deep color, low and high data rates and extensive JPEG 2000 know-how, intoPIX IP-Cores enable best-in-class picture quality.

The IP-Cores are available for the most recent FPGA platforms and ensure lower consumption, lower temperature dissipation and lower bill of material with unprecedented performances.

Fully benefiting from a modular architecture (image formats, frame rates and resolutions) and completed with a wide range of companion IP-Cores (video transport, security, memory sharing, ...), the intoPIX solutions provide an easy, timely and cost-effective way to implement JPEG 2000 technology.

**High Quality Picture**
- From Lossy to Lossless compression

**Customizable Design**
- Artix-7, Kintex-7, Virtex-7
- Kintex Ultrascale, Virtex Ultrascale +
- ZinQ-7, ZinQ Ultrascale +

**Cost Effective**
- Ultra dense
- Optimized per application

**Future-Proof**
- High Resolutions: HD, 4K & 8K
- High Frames Rates
- Ultra-Low Latency mode (<5ms)
- 4:2:2/4:4:4/Monochrome/Raw Bayer

**Companion IP-Cores**
- DDR4/DDR3/DDR2 Controller (Multiport J2K)
- MPEG-2 TS IP-Core

**Security IP-Cores**
- AES Security IP-Cores
- RSA Security IP-Cores
- Hash Function

**Easy integration**
- J2K HDK on Xilinx reference boards
- Team training
- Application reference designs
HD

The JPEG 2000 HD cores allow you to preserve image quality throughout your complete AV workflow. These IP-Cores have a decoded bitrate range from 250 Mbps up to 1 Gbps, and can process up to 120 progressive frames per second in HD resolution (1920 x 1080). Moreover, the IP-Cores flexibility enables to address all known broadcast standards in terms of resolution and frame rates.

- Single Chip
- Broadcast and IMF profile compliant (JPEG 2000 Part 1 Amd3 and Amd7)
- Any resolution up to 1080p-120 fps
- Up to 1Gbps Compressed Bitrates
- Progressive/interlaced
- 4:2:2/4:4:4
- Multi streams support
- CBR/VBR

APPLICATIONS
- Camera embedded encoder
- Field recorder
- Production video server
- Fill and Key playout server
- High Speed server for Slow-Motion
- VSF TR01 - Transport of J2K in MPEG-2 TS over IP

UHD 4K/8K

The JPEG 2000 Ultra HD 4K & 8K IP-Cores go one step further in terms of encoding power and high-end applications. This range of IP-Cores gives you access to the ITU UHDTV standards, 4K and 8K.

- Single Chip
- Broadcast and IMF profile compliant (JPEG 2000 Part 1 Amd3 and Amd7)
- IMF profile compliant (JPEG 2000 Part 1 Amd7)
- 4K resolution at up to 60fps
- 8K resolution at up to 60fps
- High bitrate flexibility

APPLICATIONS
- UHDTV 4K & UHDTV 8K
- Digital signage, Shows & Theme park
- Geospace/Aerospace
- IMF
- UHDTV 4K over 1Gbps

Ultra Low Latency Option

JPEG 2000 for Live streams

The HD & UHD family also offers an Ultra Low Latency option that enables you to carry video streams within the network with a latency below 5 milliseconds while guaranteeing high image quality.

- Sub intra-frame latency
- Visually lossless quality

APPLICATIONS
- Video over IP (SMPTE2022, VSF TR01/03, AVB...)
- Wireless Transmission
- Remote Control & Monitoring
- IP-based production

Digital Cinema

DCI compliant & HFR IP-Cores

The intoPIX Digital Cinema IP-Cores are optimized to meet the highest requirements of Digital Cinema including 2K-120 fps and 4K-3D formats. The Digital Cinema solution enables the integration within a single chip of a complete image processing chain, i.e. decryption-decoding-watermarking and encryption, together with video I/O interfaces, system control and system interfaces.

- Single Chip
- DCI compliant (JPEG 2000 Part 1 Amd1)
- 2K resolution at up to 120 fps
- 4K resolution at up to 60 fps
- Bitrates from 250Mbps up to 1Gbps

APPLICATIONS
- Cinema Mediablock (DCI & HFR)
- Cinema Post-production
- Faster than real-time encoder
- Digital Cinema Package (DCP)

J2K-RAW

Best bayer pattern images compression

J2K-RAW compression IP-cores preserve perfectly the RAW output (Bayer pattern images) of Bayer-filter cameras with best-in-class JPEG 2000 compression. Offering a visually lossless quality, J2K-RAW allows also an automatic access to low-resolution preview thanks to the JPEG 2000 scalability.

- Compact J2K-RAW IP-cores
- Wavelet-based standardized compression
- Visually Lossless and VBR support
- HD, 4K, 8K bayer pattern images at multiple frame rates
- Higher image quality possibilities within a reasonable storage and bandwidth
- Fast low-resolution preview access thanks to the JPEG 2000 scalability

APPLICATIONS
- Cameras (HD, 4K, 8K, ...)
- High-Speed Cameras
- Recorders
- Production and Post-production Servers

Lossless

JPEG 2000 for pristine content

The intoPIX Lossless encoders and decoders preserve the original image information. They support any image format up to 4K+ (4096x3112) with color depth up to 12 bit per component and JPEG 2000 Lossless compression.

- Single Chip
- Fully flexible image format up to 4K single tile
- Math. Lossless Encoding

APPLICATIONS
- Archiving
- Store and Forward
- Medical
- Aerospace
- Geospace
Companion IP-Cores
intoPIX proposes companion IP-Cores specially designed to ease the integration of JPEG 2000 and minimize your time-to-market.

DRAM Memory controller IP-Cores
DDR4, DDR3 and DDR2 cores
The IPX-DDR IP-cores match various operating frequencies and physical bus size (8, 16, 32 or 64 bit), allowing you for instance to respectively reach peak transfer rate of 34Gbit/s and 68 Gbit/s on 64 bit wide interface. These IP-cores are fully-optimized to provide a powerful interface towards the JPEG 2000 IP-cores.

Multi-core memory bridge core
The IPX-MLB is an efficient IP-core enabling multiple JPEG 2000 IP-cores to share a memory access with a single controller. Thanks to the IPX-MLB, it is easy to boost a design that needs to run multiple JPEG 2000 cores in parallel. The IPX-MLB also enables to share the memory access with other processes through an AXI4 interface.

Security IP-Cores
AES Encryption-Decryption Cores
The IPX-AES Modules are encryptor-decryptor IP-Cores providing an efficient FPGA implementation of the Advanced Encryption Standard (AES).

Hash function Core
The IPX-HMAC-SHA-1 IP-Core is the hashing function required for content integrity check and content identification as specified in DCI documents. It enables computation of the keyed-hash message authentication code (HMAC) for audio and video assets.

RSA Public Key Cryptography Accelerator Core
The IPX-RSA modular exponentiation accelerator is an efficient and low footprint arithmetic coprocessor for the RSA public-key cryptosystem. It performs the modular exponentiation calculation and therefore offloads the most computer intensive operation of RSA from the main processor. The RSA cryptosystem can be used for public key encryption, decryption and signature/authentication.

Watermarking Memory Bridge Core
The IPX-WB watermarking memory bridge offers the possibility to connect seamlessly the Civilyon Nextguard DCI Video Watermarking IP-core wit intoPIX JPEG 2000 IP-cores and to share the same external memory.

Evaluation and Integration
intoPIX offers many different possibilities to assess the quality, capability, characteristics and to speed-up the integration of a fully functional JPEG 2000 core.

Hardware Development Kit (HDK)
intoPIX HDK enables faster and reliable integration. Using a flexible structure, it focuses on providing a seamless environment for the integration of any intoPIX JPEG 2000 IP-cores, using a FPGA reference board as starting point. It validates efficiently the integration with a smart step-by-step approach and accelerates the progress towards the final customer application even before the dedicated hardware is ready. Thanks to a layered structure, it significantly eases the porting from one hardware platform to the other, and facilitates switching between applications in the same hardware environment.

• Standalone implementation of the custom IP-core flavour on a FPGA reference board
• Fastest product time to market
• Increased integration friendliness and design re-usability

Application reference designs
Additionally to the HDK, intoPIX also accelerates customer product developments with video application reference designs. The reference designs aim to bring powerful proof of concepts using intoPIX high-performance IP-cores.

• SMPTE2022 JPEG 2000 video over IP (VSF TR01 and beyond)
• UHD4K JPEG 2000 acceleration
• ...

For more information on the available possibilities, please contact sales@intopix.com
## FPGA implementation

### Image features
- Bit depth: 8, 10, 12, 14, 16
- Color Space: Any (RGB, YUV, XYZ, YCbCr, ...)
- Color Sampling: 4:0:0, 4:2:0, 4:2:2, 4:4:4, 4:2:2:4, 4:4:4:4
- Interlaced field, progressive frame
- Monochrome, 3 and 4 components, Bayer pattern
- Any resolutions (SD, HD, 2K, 4K, 8K, ...)

### JPEG 2000 (ISO 15444-1)
- Wavelet transforms: 5/3 and 9/7
- Reversible (IRCT) or irreversible color transforms (ICT)
- Decomposition levels: up to 6 levels
- Quantization steps: programmable per level and per component
- Quality layer: 1 layer
- Digital Cinema (DCI) compliant - JPEG 2000 Part 1 Amd1
- Broadcast profiles compliant - JPEG 2000 Part 1 Amd3
- IMF profiles compliant - JPEG 2000 Part 1 Amd7
- Tiling: Single tile
- Progression Order: CPRL
- Code Block Size: 32x32, 32x64, 64x32, 64x64, 128x32
- Contrast sensitivity function

### Quality and Bit Rate Control
- Max codestream bitrate configurable: typically ranging up to 250Mbps, 500Mbps, 1Gbps, 4Gbps, 8Gbps to unlimited for Lossless compression
- Variable bit rate (VBR): The overall bit rate is variable for a selectable constant quality
- Capped VBR: 9/7 wavelet filter - Constant quality but variable bit rate is capped at a given maximum limit
- Visually Lossless VBR: 9/7 wavelet filter - Constant Visual Quality - Rate is capped at a given maximum limit
- Capped VBR: 9/7 wavelet filter - Constant quality but variable bit rate is capped at a given maximum limit
- Visually Lossless VBR: 9/7 wavelet filter - Constant Visual Quality - No visually noticeable artifact - 8:1 compression used up to 20:1 Compression ratio
